

I am respectfully requesting that the FCC reject the National Association of Broadcasters heavy handed attempt to censor what I can hear on my XM satellite radio. I pay a monthly subscription fee to listen to high quality music and entertainment without the over abundance of commercials. I very strongly reject to anyone telling me what I can and can't listen to. XM Satellite Radio has every right to broadcast local and traffic reports for major cities if that is what its listeners request. It is unfortunate that the NAB is more interested in profit and controlling the airwaves than it is in getting what in some case may be lifesaving information to the general public.
